

Automatisierte Lagersysteme

Optimierte Lagerhaltung nach individuellen Anforderungen

Whatever you would like to optimise regarding your intralogistics processes, we are available to support you as a system supplier with international expertise and global presence. With engineering services, mechanical engineering, steel construction and control technology all from one source and in-house IT and software development, we ensure the perfect interaction of all components.

Our innovative, automatic storage and retrieval systems allow rapid transport of material and short access times. Whatever challenges you might face, SSI SCHAEFER has the concepts and solutions to suit your needs.

Advantages include:

- Perfect space utilisation thanks to minimal clearances
- Optimised goods handling performance thanks to modified dynamics and a variety of different drive units
- Easy maintenance thanks to the use of high quality machine elements
- Short assembly times thanks to compact assemblies and pre-commissioned storage and retrieval systems
- Adaptation for your load carriers with specially designed load handling devices

Thanks to the modular design, every solution from SSI SCHAEFER can be modified specifically for the customer and adapted on-site; regardless of whether the project is a new project, an integration or a modernisation project.

Tested for long life span

All machines and components from SSI SCHAEFER are subjected to numerous in-depth and long-term tests and continually developed in our 4000 m² technology centre at Giebelstadt.

This is how we ensure that when our products enter the market, they have no components particularly liable to wear and are perfectly adjusted to all the requirements in the market.

If you are interested you are welcome to visit our technology centre and see for yourself what range of products and services we offer and how our systems perform.
