

Kleinteilelager

Automatische Kleinteilelager für Behälter, Tablare und Kartoneinheiten

Whether you are using containers, trays or carton units in your small parts stores; space and time should be used efficiently. This can easily be achieved with our automated systems. In addition to significantly reduced access times and low space requirements, you will also benefit from the high level of flexibility and the modular design of our solutions.

From planning to training

When setting up new storage or optimising your existing automated small parts store, you can rely on us right from the start. We offer a comprehensive range of services which includes the individual planning for new projects and the integration into your existing warehouse logistics, the software link to your inventory control system and complete project implementation incl. training, service and maintenance.

From racking through to conveyor technology down to your order picking strategy, we design and implement customised systems based on your specific requirements down to the smallest detail. Our innovative, automatic storage and retrieval systems allow rapid transport of material and short access times.
