

Neu- und Erweiterungsplanung

Intralogistik-Konzepte von Analgenkonzeption bis zur Prozessplanung

Increasing efficiency means increasing performance. In line with this approach, we develop intralogistics concepts, design our systems and implement systems and products that meet the same objective down to the smallest detail.

More efficiency, more performance, added value – for our customers

New and expansion planning projects with SSI SCHAEFER leads to an exchange and transfer of knowledge on all levels. Many years of experience and a track record of highest performance worldwide allow us to ask the right questions and provide the correct answers.

From the choice of the building site or its improvement through designing buildings and facilities to process planning: Our services cover a broad range.

Questions we are answering:

- Where are your customers located? Where should your site be situated?
- What are the requirements for the infrastructure?
- Is it possible to use existing space and buildings?
- Are you running out of space?
- Is it possible to use renewable sources of energy?
- What are the available options regarding energy efficiency?
- What does the system design look like with optimised routes?
- Is there any potential in the area of mechanical and electrical optimisation?
- What might intelligent load carriers contribute to the solution?
- What does an effective and efficient workplace look like?
- What are the potential approaches for order optimisation?
- Could routes get re-designed to be shorter and more logical?
- And much more...

You don't need to wait long for answers, because SSI SCHAEFER has specialised and sector-specific in-house knowledge.
