

Split Case Picking - Einzelstück-Kommissionierung

Produkte und Waren effizient sortieren und kommissionieren

Are you looking for an efficient solution to pick individual items? Well, look no further. A crossbelt sorter increases picking performance whenever large amounts of goods need to get sorted and picked.

The crossbelt sorter from SSI SCHAEFER is a split case picking system which can be used in batch order picking as well as handling of returns. Customers from different sectors, such as mail order business, textiles, food, consumer goods and e-commerce already rely on this system to sort large volumes of different products.

Our crossbelt sorter does the sorting in a fast and precise way while handling your products with care. Slides as well as conveyors can be used as destinations. They can be arranged closely and flexibly. With a speed of up to 2.5 m/s, throughput can reach 10,000 items per hour.

Naturally, we also consult our customers, plan the entire system and provide consistent project management. All components are manufactured in-house. Our customers benefit from SSI SCHAEFER's experience as a service provider, offering everything you need as a one stop shop. Contact us and see for yourself!

Advantages of the SSI SCHAEFER split case picking system:

- Fast and precise sorting, gentle on the product
- High speeds up to 2.5 m/s
- Output rates up to 10,000 items per hour
- Close and flexible layout of slides and conveyors
