Durchlaufzeiten in der Auftragsabwicklung verringern

Would you like to do your order picking and sorting carton by carton? If so, you should definitely contact us!

Depending on other requirements, up to 6,000 cartons per hour and more can be sorted. These high throughput levels allow our customers to speed up their order processing significantly.

A variety of different methods for package sorting can be used. Those include controlled roller points (see image) with an output of up to 3500 units per hour, linear sorters at over 6000 units per hour and crossbelt sorters with up to 10,000 units per hour.

Because SSI SCHAEFER is a specialist in intralogistics with experience from hundreds of projects, our experts are able to determine quickly, which technology and which system will be the best fit for your intralogistics challenges. To benefit from that, contact us now!
